WHY WORK REQUIREMENTS ARE CRITICAL

- In 2016, Medicaid cost taxpayers \$565.5 billion, and current trends project Medicaid to cost more than \$1 trillion by 2038.
- Changes under the Affordable Care Act drastically changed Medicaid from a program designed to serve the neediest to one that now also serves healthy adults with no dependents.
- This government expansion has increased Medicaid costs and has caused healthy adults to leave the workforce or work fewer hours in order to qualify for benefits.
